Project Name	Resolvenow: Your Platform For Online Complaints
Maximum Marks	4 Marks

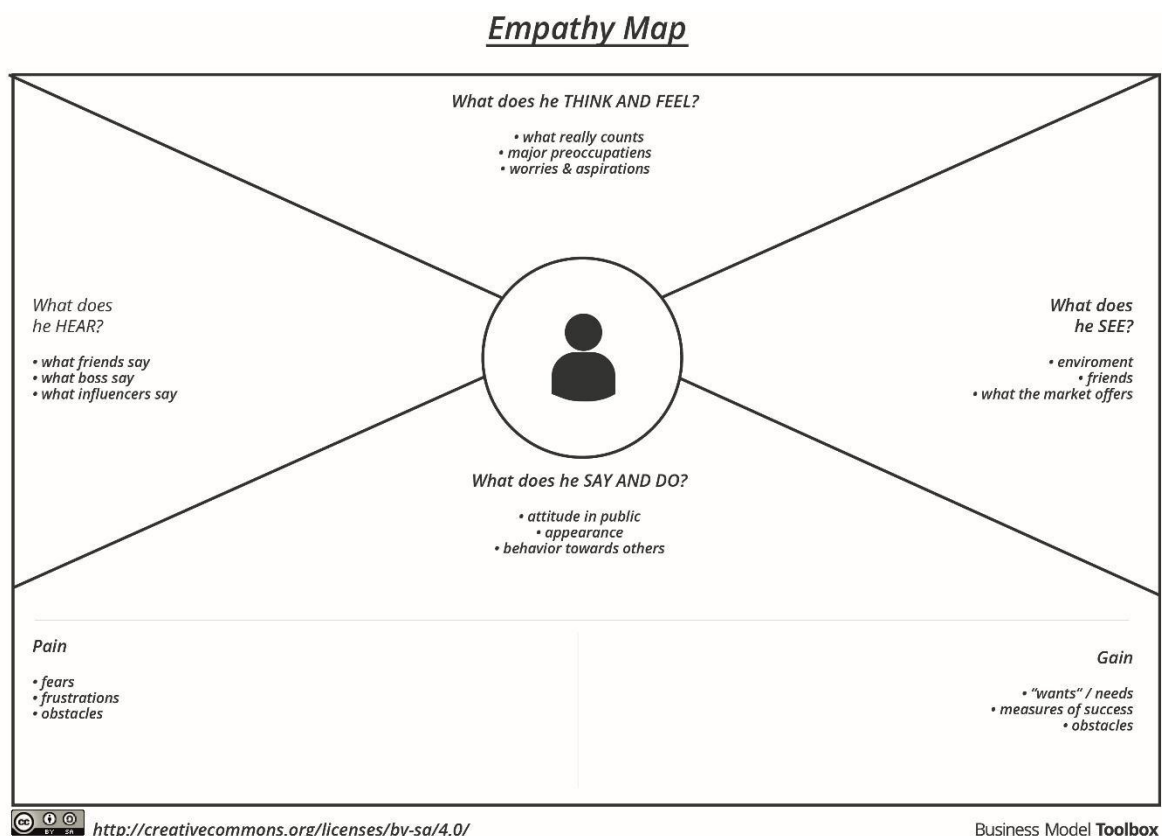

Empathy Map Canvas:

An empathy map is a simple, easy-to-digest visual that captures knowledge about a user's behaviours and attitudes.

It is a useful tool to help teams better understand their users.

Creating an effective solution requires understanding the true problem and the person who is experiencing it. The exercise of creating the map helps participants consider things from the user's perspective along with his or her goals and challenges.

Example:

Example: Food Ordering & Delivery Application

Example Scenario: Use of ResolveNow in a Small Fruit Industry

Ravi runs a small fruit-sorting and packaging business where he and a few workers handle daily shipments of apples, bananas, and other produce. The business relies heavily on proper sanitation, water supply, and street lighting near the facility to operate smoothly and maintain food safety standards.

However, Ravi often faces issues such as uncollected garbage piling near his warehouse, water supply disruptions, and broken streetlights that affect late-night loading operations. Reporting these civic problems used to involve visiting municipal offices or making multiple calls — often with no follow-up or action.

Ravi wants a simple, digital solution to raise complaints and get timely updates. With the **ResolveNow** web app, Ravi can log in, describe the issue, upload a photo, and submit a complaint in just a few clicks. The app assigns the complaint to the concerned municipal officer and tracks the resolution status in real-time. This saves Ravi time, increases accountability, and ensures a cleaner, safer environment around his business — without needing repeated manual follow-ups or paperwork.
